

"CuriousDevs builds platforms. CyberSentinel protects them."

A unified cybersecurity platform that discovers, scans, simulates, and defends your entire digital attack surface — all from a single console, all under your control. Built around six integrated modules that span the full security lifecycle.

THE SIX MODULES

◆ Attack Surface Mgmt **ASM**

Continuously discovers internet-facing assets, domains, IPs, and exposed services. You decide what is tracked via an explicit "Promote to Asset" flow.

◆ Vulnerability Scan **VS**

Scans discovered assets for known vulnerabilities and surfaces real, prioritized risk for remediation.

◆ Breach & Attack Sim **BAS**

Safely simulates real-world attacks to test how your defenses actually hold up under pressure.

◆ Threat Intelligence **TI**

Enriches findings with external threat context, so you know what is actively being exploited in the wild.

◆ Incident Response **IR**

Manages the response and remediation workflow the moment threats are detected.

◆ Compliance & Audit **CA**

Tracks compliance posture and maintains audit trails for clean, defensible reporting.

Key differentiator: Scan frequency is fully customer-configurable — not fixed — so teams control their own cadence instead of being locked to a vendor schedule.

TECHNOLOGY

Frontend	React + TypeScript + Vite
Backend	Python FastAPI (fully async)
Database	PostgreSQL (SQLAlchemy async)
Workers	Go + RabbitMQ job queuing
Auth	Supabase OAuth (Google + GitHub)

nmap masscan rustscan httpx dnsx sslyze gowitness
ipinfo.io BGPView AbuseIPDB

BUILD STATUS

ASM **MOST MATURE**

Deepest architectural work; full audit done, "Promote to Asset" flow architected.

Auth **IN PROGRESS**

Supabase migration: OAuth, JWT validation, and profile sync.

VS **QUEUED**

Partially built; paused to prioritize ASM, resumption queued.

Brand & Landing **ACTIVE**

Identity finalized; landing page rebuild with honest positioning.

POSITIONING

CyberSentinel is presented with complete honesty about where it stands — an early-stage platform under active development, with no fabricated social proof, user counts, or testimonials. It serves as proof of CuriousDevs' broader vision as a technology ecosystem company, rather than standing alone as the whole story.

"CyberSentinel is a unified cybersecurity platform that discovers, scans, simulates, and defends your entire digital attack surface — all in one place, all under your control."
